(54) Title: ANIMAL TRAINING DEVICE

(57) Abstract: An animal training device (10) comprises a housing (11), a sound producing member, an actuator (15), and a whistle (21, 23). The sound producing member is mounted within a central cavity (12) formed in the housing (11), whilst the actuator (15) is provided in an opening (14) in one face (13) of said housing (11). The actuator (15) is arranged to transfer to the sound-producing member a manual force applied to said actuator (15), thereby to produce a first audible signal. The whistle (21, 23) comprises a resonance chamber (23) formed integrally in the other face (22) of said housing (11), and a mouthpiece (21) in communication with said resonance chamber (23). The whistle (21, 23) is adapted to produce a second audible signal upon a user blowing into the mouthpiece (21).
